

Danilo Brontolone

AI Engineer | LangChain & AWS Expert | Multi-Agent Systems Developer

+1 (830) 223-8047 @ danilobrontolone37@gmail.com <https://www.linkedin.com/in/danilo-brontolone-8a8258370/>
Florence, Italy

SUMMARY

AI professional with over 5 years of experience in AI engineering and backend development, expert in AI architecture and Retrieval-Augmented Generation. My key achievements include leading the creation of a multi-agent platform for healthcare intake that improved business flow efficiency by 20%, and developing conversational AI solutions serving thousands of users, which reduced report generation time from 3 days to 8 hours. Seeking an AI Engineer position, where I bring my AI engineering and agentic workflow skills to support your mission of developing innovative, scalable AI solutions.

EXPERIENCE

AI Engineer

NovaMind Inc

03/2023 - 12/2025 Wilmington, USA

- Senior back-end AI Engineer on 3-person core team building AI-powered health care intake platform.
- Led design and implementation of multi-agent OS and session memory, enhancing efficiency and reliability.
- Planned and deployed multi-agent AI orchestration systems, automating complex health care processes and refining end-to-end task efficiency by around 20%.
- Created and streamlined Retrieval-Augmented Generation pipelines, increasing document retrieval precision by 15% and saving 10 hours of manual lookup per week.
- Developed and deployed AI voice agent managing 100 calls per day, achieving approximately 85% intent recognition accuracy and reducing human agent workload by 20%.
- Executed contextual memory and multi-turn reasoning, increasing conversation retention and task completion rates from approximately 60% to 70%.
- Deployed and maintained scalable and fault-tolerant AI services using containerization platform, consistently achieving more than ninety-nine percent service uptime.

AI Engineer

Cognitiva Labs

01/2022 - 01/2023 Warsaw, Poland

- Developed and scaled conversational AI platforms serving from 2000 to 5000 monthly active users, boosted average response accuracy by 15% through iterative model tuning and evaluation.
- Built AI-driven analytics and reporting pipelines, reducing report generation cycles from 3 days to 8 hours, enabling faster business decision-making.
- Designed and executed prompt engineering strategies and large language model evaluation process, escalated response relevance and consistency by 15% across production use cases.
- Applied text embedding and semantic search pipelines, improved document retrieval precision from 60% to 75% through optimized chunking and similarity scoring.
- Integrated AI capabilities into production back-end services using REST and Graph Query Language interfaces.

Machine Learning & Backend Engineer

Helix Data Solutions SRL

12/2020 - 12/2021 Milan, Italy

- Developed and enforced machine learning models, increased prediction accuracy across client pipelines by 15% through feature engineering and model tuning
- Built and deployed REST serving around 2000 requests per day, reducing average client response times by 20%
- Streamlined and automated data ingestion and extraction, transformation, and loading processes, reducing end-to-end processing time by 20% and improving data reliability
- Delivered two machine learning applications from data preparation and model building through deployment, meeting all project deadline and requirements
- Implemented continuous integration and continuous delivery pipelines for machine learning services, reducing deployment errors by 30% and accelerating release cycles

EXPERIENCE

ML/DL Engineer

Aquila AI Research

📅 10/2018 - 11/2020 📍 Florence, Italy

- Trained neural network models. Elevated accuracy by 10% via experimentation and tuning.
- Processed, cleaned, and labeled 1M+ text records to support large-scale model training and evaluation.
- Expanded supervised and unsupervised learning pipelines, reducing feature extraction and preprocessing time by 15%.
- Contributed to development of two research-grade ML prototypes, later validated through pilot deployments.
- Performed data preparation, feature extraction, and model evaluation using deep learning framework, increasing validation score and improving prediction stability.

SKILLS

Python	Rust	Typescript	Flask	FastAPI	Django
LLMs	Retrieval-Augmented Generation	Agent	LangChain	Lang Flow	
Machine Learning	Deep Learning	Scikit-learn	Pandas	PyTorch	TensorFlow
Docker	Kubernetes	GCP	Azure	AWS	BigQuery
